

TE760

HYDRAULIC DRIFTER

The TE760 has 3 power outputs to ensure our drifter meets all drilling requirements in its performance range.

The Automatic Stroke Adjustment (ASA) makes for smooth operation, greater efficiency and the best drifter protection (longer service life).

This feature also gives the drifter dampening at both the strike point and return point for longer seal life and tooling life.

The heavy duty front head design with increased torque is optimal for both long hole face drilling and vertical blast hole drilling.
